AVIJE Modern Communications Development Engineering company (Privately held company)

AVIJE Modern Communications Development Engineering company (Privately held company) was founded in July 2015, drawing on the valuable experience of its top managers in communication, information technology, project management security, and knowledge management.

As Avije's activities expanded, its offerings grew to executive, technical, and engineering fields, along with the supply of professional energy equipment.

Thanks to effective potential and experienced executive and engineering management teams, Avije achieved a magnificent history in the design, supply, and implementation of instrumentation, monitoring, DCS, SCADA, F&G, and ELV and its dependents.

Today, Avije family offers a wide range of services and products in the fields of executive project control and management, consulting and supervising the design and implementation of large-scale knowledge management projects in the Internet of Things, IT services, development and commercialization of digital services, providing and creating content, and the development and innovation of games and interactive game-based applications.
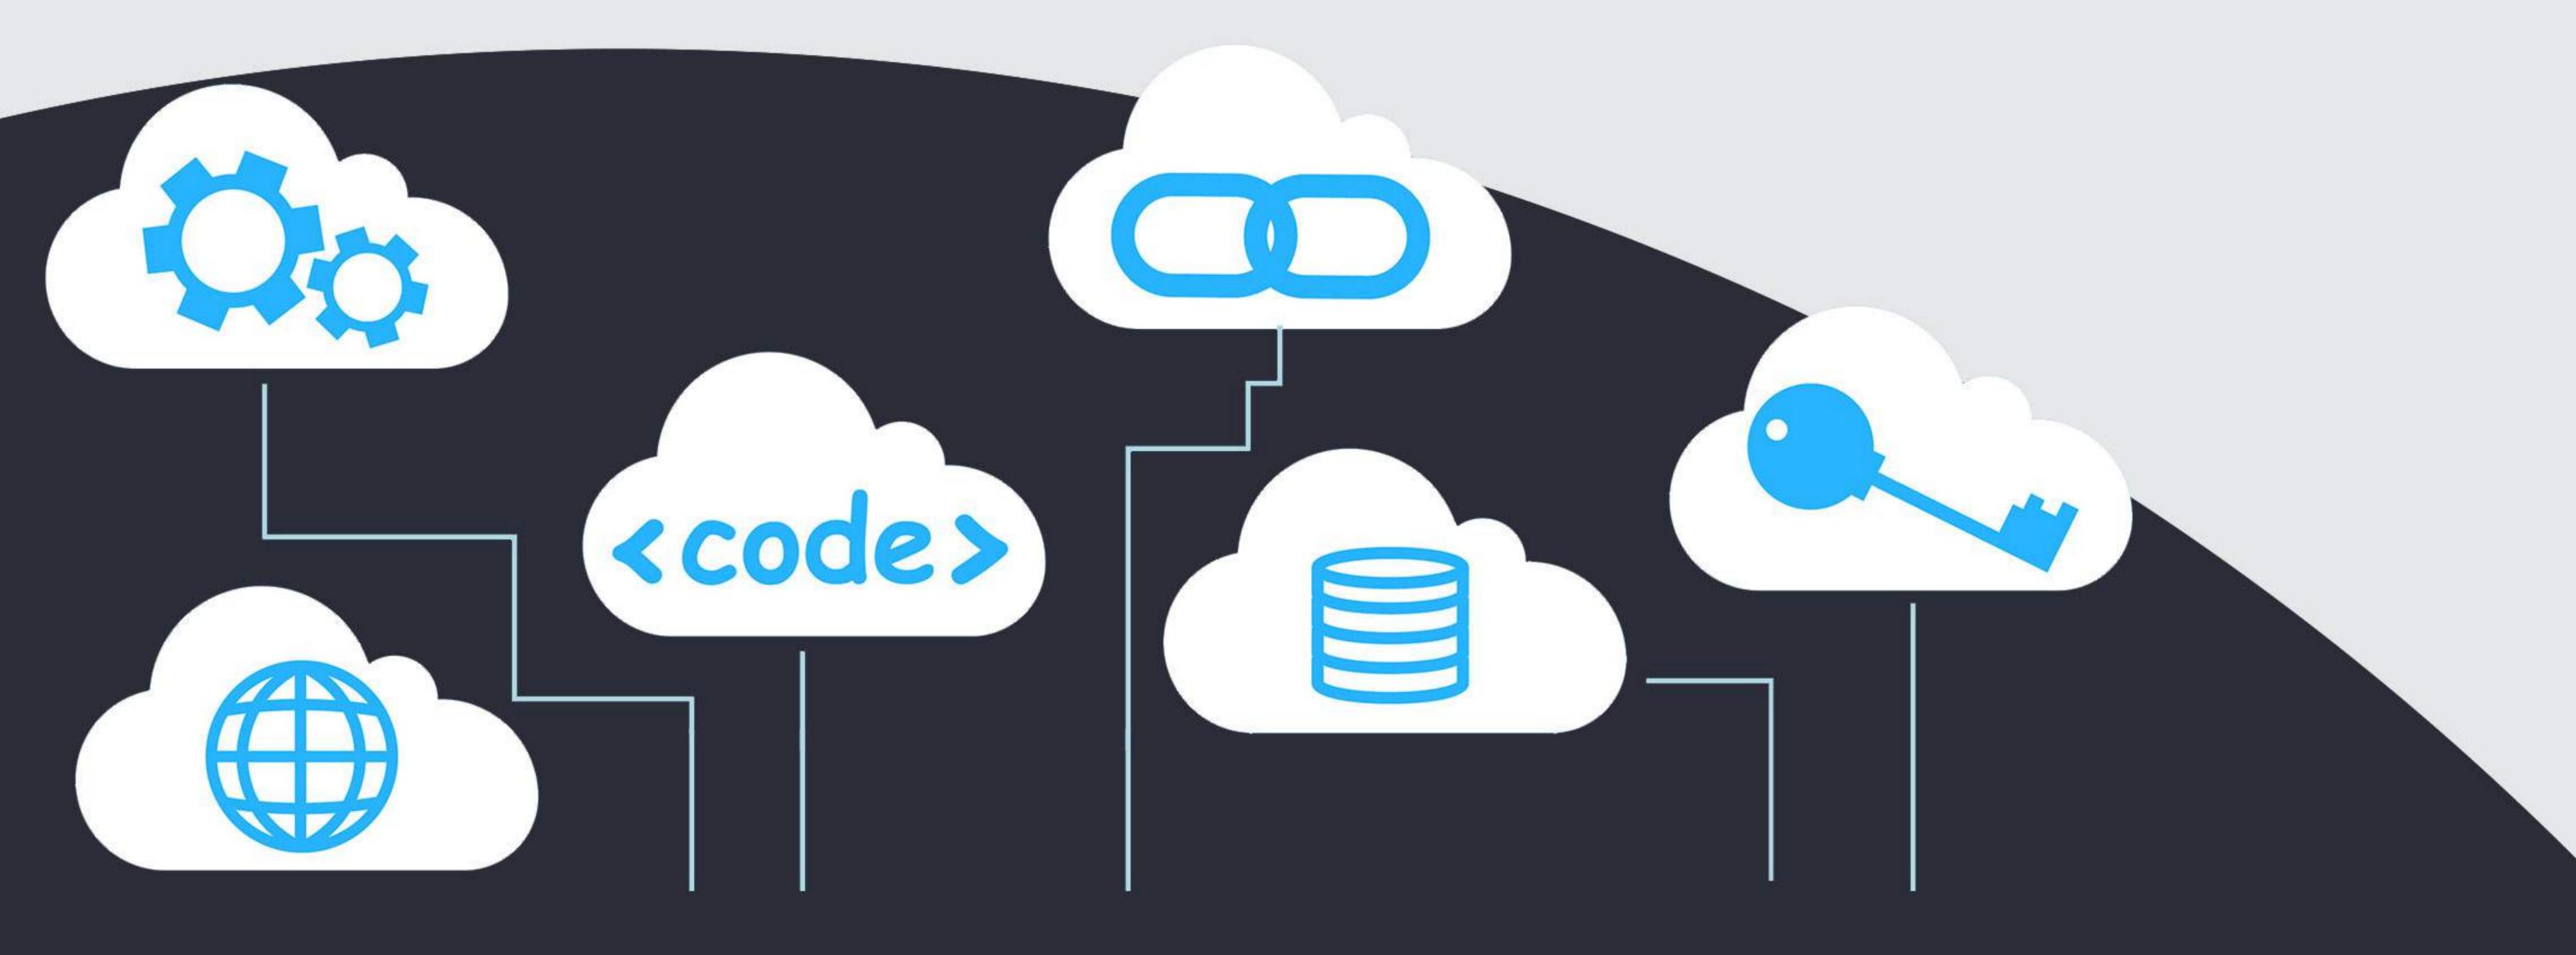

Services

1. Software Industry

Designing and implementing:
- Comprehensive Website Content Management Systems
- Comprehensive Digital Library Management Systems
- SMS systems
- Support system
- Ticketing system
- System of application content management
- Queuing system
- Online shop system
- Membership registration and management system
- Online exam system
- Statistical panels
- Mobile applications in the streaming field
- Android & IOS Online Shops (News & Practical fields)
- Content-Based Games (App & Web)
- Support and development of products

2. She'er Mal e To

The goal of developing this poetry application is to provide users with an engaging and competitive environment. This software will offer users a wide range of opportunities to test their memory in domains such as poetry and music, while allowing them to compete with their peers as well.

3. Ahang e to

Ahang e to combines a mobile game with karaoke app to rank players depending on the points they earn, utilizing very precise algorithms.
- The most successful karaoke platform in Iran, with the highest accuracy of note recognition during live performances.
- Innovative design with drop gamification.

4. Video Streaming Platform Specifications:

- Dynamics of the application to develop its content.
- Content panels for application management.
- Using the most recent programming methods for proper and updated implementation.
- Using completely tailored visuals for each application.
- The ability to create and produce numerous apps based on user scenarios and demands.

5. Hardware Industry Projects

- Technical studies and consulting services for economic plans and telecommunication infrastructure development, as well as solutions for transferring excess capacity from the Islamic Republic of Iran Railways.
- Supply and installation of a CCTV system for Tehran Metro Line 6.
- Heris Combined Cycle Power Plant paging system
- Designed, provided, and installed surveillance cameras for Bandar Abbas 100,000 cubic meter Water Desalination Plant.
- Designing, delivering, implementing, setting up, and training for the Guilan Water Treatment Plant's video surveillance system.
- Designing, purchasing, providing, installing, and setting up the surveillance camera system at the Asaluyeh BOO Power Plant.
- Design, supply, and installation of the West Karun Power Plant's CCTV system.

6. Hardware services

- Extra-low voltage systems
- IPCCTV camera system
- F&G Fire Alarms and Extinguishing Equipment
- BMS intelligent building management systems
- Local networks using various fiber, cable, and radio LAN WAN platforms
- Equipping the data center and intelligent networks of Data Centers
- Paging VOIP Intercom intelligent systems
- PABX Hot Lines telecommunication systems
- Access Controls intelligent traffic control equipment
- FFT (Fast Fourier transform) Radio communication equipment and modems
- Fiber Optic SDH transmission systems
- Structured cabling and corresponding infrastructure.

7. Hardware domain

Avijeh hardware unit includes service departments that provide equipment, install and implement equipment, and carry out various engineering tasks. This unit implements numerous industrial projects by providing advice, design, supply, installation, and commissioning services, as well as the potential and expertise gained from previous projects.

Avije project management unit offers a variety of services in this industry, based on EPCM. Avijeh Projects Unit offers all sorts of engineering design services, as well as supply, installation, and implementation of after-sales and support services in the contracting and implementation domains, using EPCM and EPC collaboration methods in various situations.

8. Nahan Platform

Nahan Platform is a general backend and server service provider for game, application, and IoT product creators, which is important for two reasons: it removes the technical complexities of the game and application backend, and it reduces the technical and commercial complexities of publishing the game in different countries and platforms.

This system's software architecture is designed to guarantee service speed and quality, as well as data security for users and customers. It is specifically built for teams, startups, and businesses with limited resources.

9. Authentication

Avije offers various authentication methods based on the scenario requested by organizations; the common feature of all methods is the use of information from the country's civil registration organization's database, as well as the use of the world's most advanced authentication algorithms. Indeed, the authentication procedure can be carried out with artificial intelligence or expert confirmation.

10. Other projects:

- Hamrah e Aval and Irancell content projects such as Khane Mani, Zehne Abi
- Educational content-based podcasts include Chahargah, Cinema Zaban, Video, and Health, etc.
- Application and Web Content Management System

11. Current Projects:

- Authentication with Iranian e-government counter, production, and commercialization of value-added services in the Middle East region.
- Nahan gaming platform
- Application and website design and support
- DDMPORTO
- Game produce and represent in cooperation with Ipcom Company
- Parsa Nik Utab Company
- Tax trustee
- Surveillance cameras
- West Karoon Power Station projects
- Metro
- Payment facilitator
- Armed Forces Pension Fund
- Brokerage companies
- Fartak
- Koodak e Shikpoosh
- Khosh Khan
- Behsan Air Iranian
- KYC Software
